

## Test 1

Test case - Test the login functionality

- Start from the website's homepage
- Navigate to the login form on the site
- Input valid user credentials
- Submit the form
- Verify that the user is logged in

**Expected Results:** Logged in successfully

**Actual Results:** Logged in successfully

## Test 2

Test case - Test error handling on the login form

- Start from the website's homepage
- Navigate to the login form on the site
- Input invalid user credentials
- Submit the form
- Verify that a relevant error message is displayed, and the user remains on the login screen

**Expected Results:** Failed to log in

**Actual Results:** Failed to log in

## Test 3

Test case - Test adding an item to the cart

- Begin with a logged-in user on the homepage
- Search for product
- Click on the "add to cart" button
- Verify that the product is added to the cart by checking the cart summary

**Expected Results:** Item successfully added to cart

**Actual Results:** Item successfully added to cart

#### **Test 4**

Test case - Test the removal of an item from the cart

- Begin with a logged-in user who has at least one item in their cart
- Navigate to the cart page
- Click on the "remove" button for a specific item
- Verify that the item is removed from the list of items in the cart

**Expected Results:** Item was removed from cart

**Actual Results:** Item was removed from cart

#### **Test 5**

Test case - Test the search functionality

- Start from the website's homepage
- Input valid product in the search field
- Validate that the product exists in the search result page

**Expected Results:** Product was found in the search results

**Actual Results:** Product was found in the search results
